

Greetings

Nishida Technical Industry Co., Ltd. is a manufacturing company. We were established in 1957 as a machine design company. Since then, we have dedicated ourselves to meeting customer needs through a business focused primarily on metal cutting, processing, and machine assembly.

All of our employees share the goal of providing customers with high-quality machinery and parts. We take particular pride in our ability to precisely process large cast components and to consistently complete large-scale, high-quality machinery. While continuing our founding business of machine design, we also manufacture machinery under our own brand.

It is often said that the lifespan of a company is 30 years, but we have thrived here in Ueda for more than twice that time. We owe this achievement to our customers, employees, business partners, and all other stakeholders, to whom we would like to express our sincere gratitude. We hope for your continued support as we strive toward even greater growth in the future.

President and CEO
Takuo Nishida
