

# Integrated Production

## Production process

Nishida Technical Industry's philosophy is "Creating machines from the user's perspective."

We meet customer needs through our integrated production system, covering design and development, parts manufacturing, procurement, assembly and adjustment, and after-sales maintenance.

"If only there were a machine like this. . . ." "We need a machine that can solve this issue. . . ." If you have any machine-related needs, please consult us first. We will help turn your visions and dreams into reality.

### Orders

If you have a specific machine in mind for your production site, want to update your current equipment or have any other needs, come to us. We will do our utmost to meet your demands.

I wish we had a machine that could do this. . . .

### Consultations

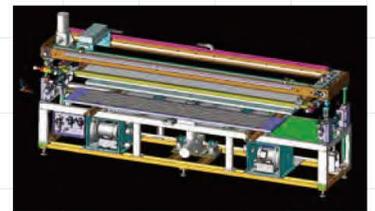

Detailed consultations with customers help us uncover hidden challenges and discover new issues. Creativity begins when we communicate with customers.

### Design and development

Our team will propose many ideas and refine them through trial and error to bring your visions to life. Our experience and creativity, cultivated throughout Nishida Technical Industry's long history, help us design "machines for users."

### Manufacturing

Our manufacturing team takes the designs conjured up from your visions and pours their expertise and dedication into crafting each component and assembling them.

### After-sales maintenance

Even after you start using a machine, our after-sales maintenance ensures that you stay satisfied. We are always coming up with ways to improve the user experience and update machine functions.
